## **DETAILED ACTION**

### ***Claim Objections***

1. Claims 6 and 7 are objected to because of the following informalities:
  - a. It is suggested that “described in any one of Claim 2” be changed to “according to Claim 2” in claim 6.
  - b. Claim 7 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 7 sets forth the same limitation as claim 4 upon which it depends.

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102/103***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4, 6 and 7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Levine et al. (US 4,105,298). Levine et al.

Art Unit: 1774

discloses electro-optic devices comprising a perfluorinated polymer layer (see abstract). The perfluorinated monomers of the polymer include perfluorocycloolefins with regard to claim 2 (see col. 2, lines 28-34). Levine et al. teaches two electrodes for the device and light passes through at least one of them. Levine et al. discloses light passes through the material (see col. 1, lines 10-23), but does not specifically describe the light transmittance properties of the perfluoro material. Since Levine et al. appears to teach a polymer of applicant's preferred perfluoroolefin, the properties of claim 1 are considered inherent to the material since the material is comprised of the required materials. In the alternative that Levine et al. is not sufficient to anticipate the properties of claim 1, it would have been obvious to one of ordinary skill in the art to have formed a polymer film with the properties, because Levine et al. teaches all of the required materials of the polymer set forth in the claims. Furthermore, recitation of a newly disclosed property does not distinguish over a reference disclosure of the article or composition claims. *General Electric v. Jewe Incandescent Lamp Co.*, 67 USPQ 155. *Titanium Metal Corp. v. Banner*, 227 USPQ 773. Applicant bears responsibility for proving that reference composition does not possess the characteristics recited in the claims. *In re Fitzgerald*, 205 USPQ 597, *In re Best*, 195 USPQ 430.

#### ***Allowable Subject Matter***

4. Claim 5 is allowed. The prior art fails to teach or to render obvious a method of forming an organic electroluminescence device specifically comprising a cover film of polymers of decomposition products of a perfluoroolefin formed by chemical vapor deposition.

Art Unit: 1774

*Conclusion*

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
